Hi Claudia,

Ok so steps would be:

1. Delete the entire record that have a link to a passive (leaving only site records as N for existing sites that have other shots off them)
2. Send DB update request
3. After request is complete submit new update with just the required channels

Thanks for your help,

Tim

Tim:

Currently Validate doesn't handle this for passives. When a channel needs to be deleted the passive system has to be deleted and then re-add to the database.

See the attached file.

Subject: Error deleting channel from passive

Hi Claudia,

There seems to be a bug with passive sites.

I want to Delete an unused channel 1 and leave the two remaining channels 1001/1002.

1. I pull the record
2. Go to the channel (“1” in the case) and change to D
3. Validate
4. It then automatically puts a D in the antenna (passive) and gives me an error message saying I can’t delete an antenna with channels associated

Have tried this several times and with different sites and get the same result. Also tried changing the D for the antennas to a U and N manually and still reverts back to D.

Thoughts?

Cheers,

Tim
